

Spotlight on: A world class centre arises from the French ground-zero

If you could build a brand new cancer centre, plug it into a dynamic research and development environment and even custom build an interface with every clinic in the region where cancer patients are treated, how would you go about it?

Jean-Pierre Armand, a veteran medical oncologist from the Gustave Roussy, is one of the few people ever to be asked that question as more than a hypothetical exercise. This Spotlight article tells the story of how his dreams shaped the new Toulouse University Cancer Hospital, which is set to take its place among Europe's finest when it opens early next year. Cancer World Newsletter - A world class centre arises from the French ground-zero.
